Problem Understanding

The Problem: Fragmented Healthcare Systems

- Delays in Medical Emergencies: Higher fatality rates due to slow response times.
- Data Fragmentation: Lack of integration between wearable data, medical records, and consultations.
- Lack of Real-Time Monitoring: Limited proactive tracking of patients' health.

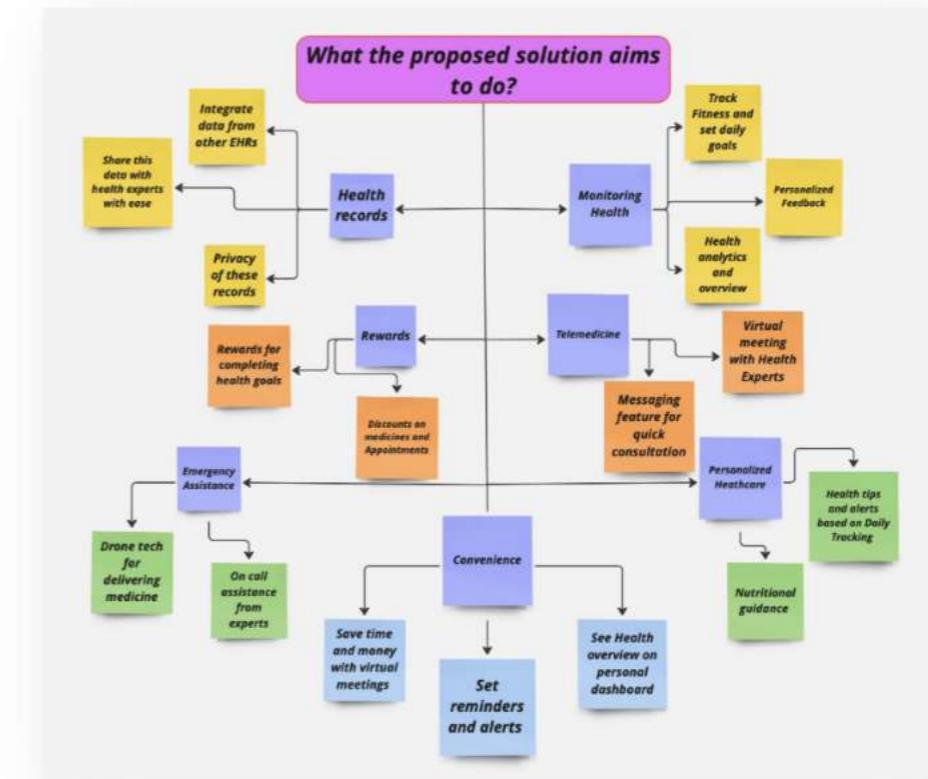

Who is Affected and What we Aim to Achieve

Target Audience:
Patients, caregivers, and healthcare providers.

Core Objectives:

- Proactive health tracking using IoT and AI.
- Unified platform for seamless health record management.
- Easy access to expert consultations and prescription management.

Requirement Gathering

Understanding User Needs

Methods Used:

Surveys, Interviews, and Brainstorming were conducted to gather diverse insights from users and healthcare professionals.

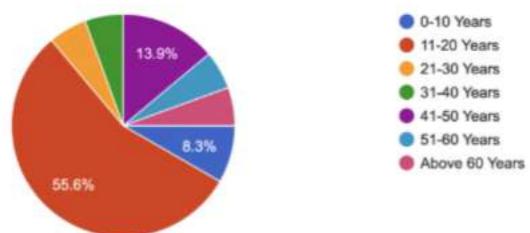

Key Findings:

- Users prioritize general health monitoring over specific chronic disease management, but features addressing mental health, weight issues, and chronic conditions remain essential.
- Physical activity levels vary significantly, highlighting the need for fitness-tracking features suitable for both active users and beginners.
- Most desired features include:
- Appointment Scheduling for convenient access to healthcare providers.
- Health Tracking for metrics like weight, activity, and chronic conditions.
- Prescription Refills for easy medication management.
- AI Chatbot for real-time health-related queries.

Requirement Gathering Survey Responses

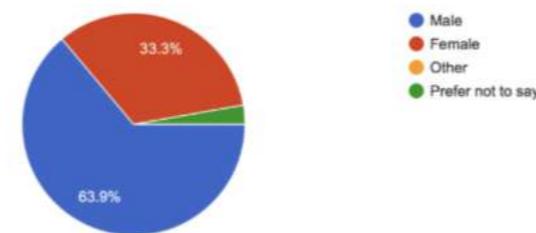

What is your age?

36 responses

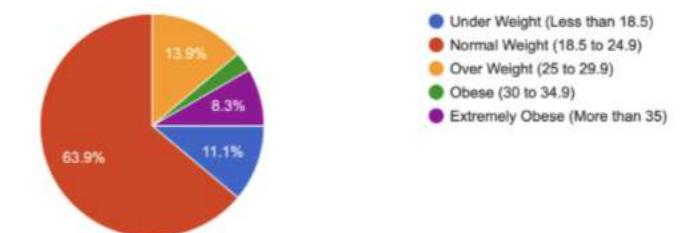

What is your gender?

36 responses

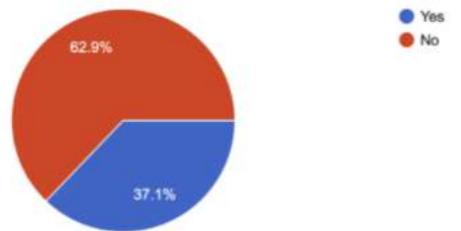

What is you BMI status

36 responses

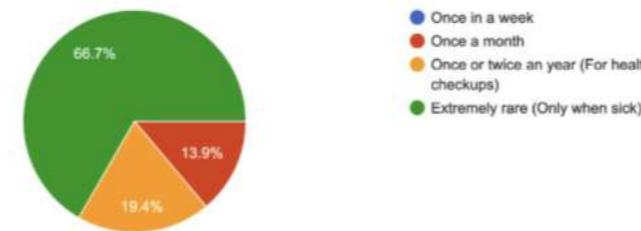

Do you have any family medical history

35 responses

How frequently do you visit the doctor?

36 responses

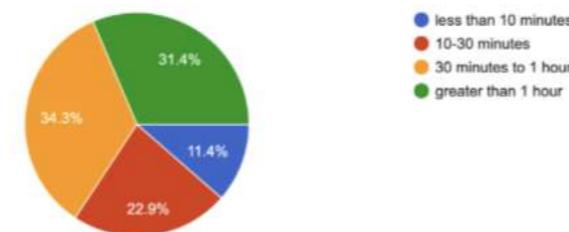

What was the result for you last checkup?

36 responses

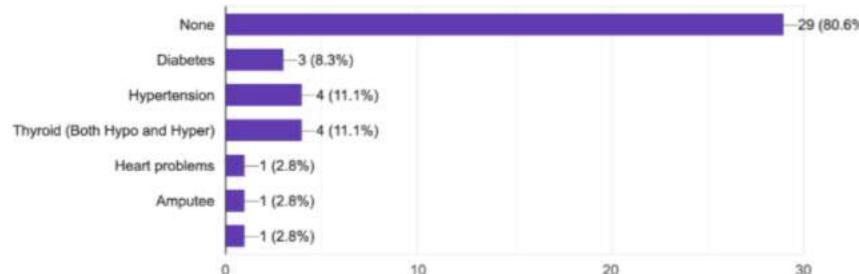

What is duration of physical activity in your daily life?

35 responses

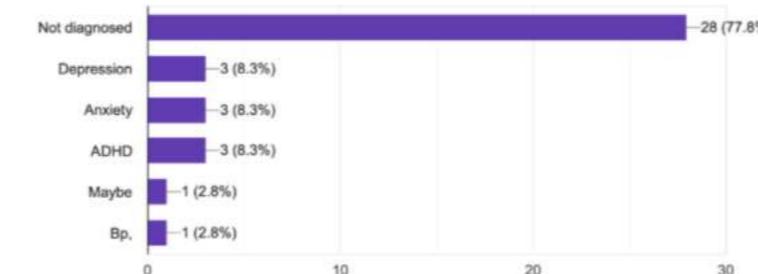

Requirement Gathering Survey Responses

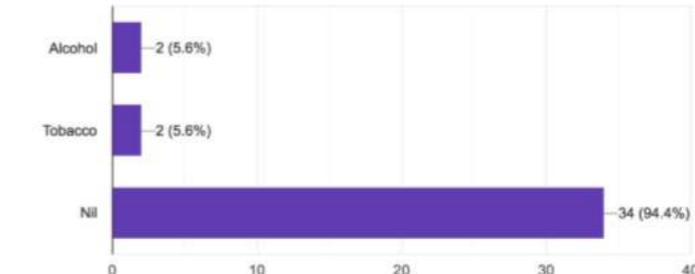

Do you suffer from any of the following chronic diseases or condition
36 responses

Have you been diagnosed by any of the following medical condition
36 responses

Do you regularly consume any of the following substance?
36 responses

Has there been any medical case in your life before that could have been prevented if proper precautions had been taken or if emergency response was timed properly. If yes please describe the incident, else type "No"

36 responses

No

No

If my college had not kept exam on that day inspite of people suffering in large number in college, I would not have caught covid.

Yes. If I properly took care of myself and not ignored dehydration, I might not have fainted while walking in afternoon heat under the sun.

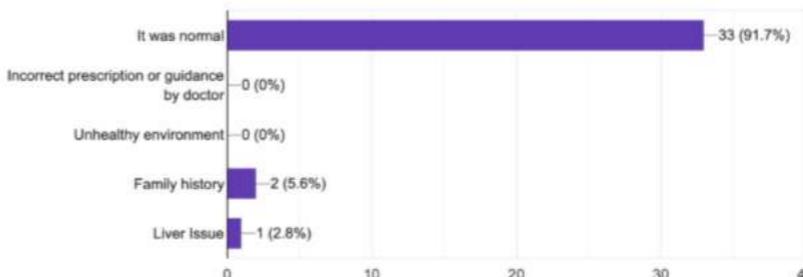

Yes, my grandmother's cancer could have been detected earlier

Yes.

Asthma, diabetes and eczema

If the result for last test was abnormal, what do you think was the main reason for it?

36 responses

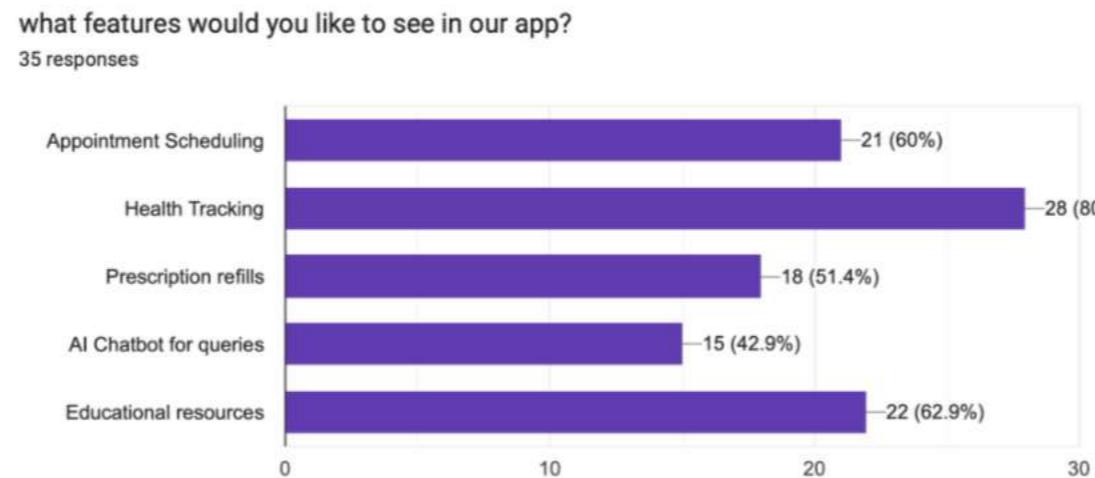

Requirement Gathering Survey Responses

Suggest some options/features that should be a must in such application if possible.
12 responses

- Make the UI accessible for elderly/ people not familiar with gadgets
- Analyzing symptoms and giving general information about possibilities.
- No suggestion
- Tracking the data of all the previous tests done by the user
- Live Vitals Tracking and an option to make Appointments with Doctors
- Emergency help online any time
- Option for scheduling home check ups for older people
- Appointment reminders, emergency calling
- An emergency sos option that can be used in case of medical emergencies.

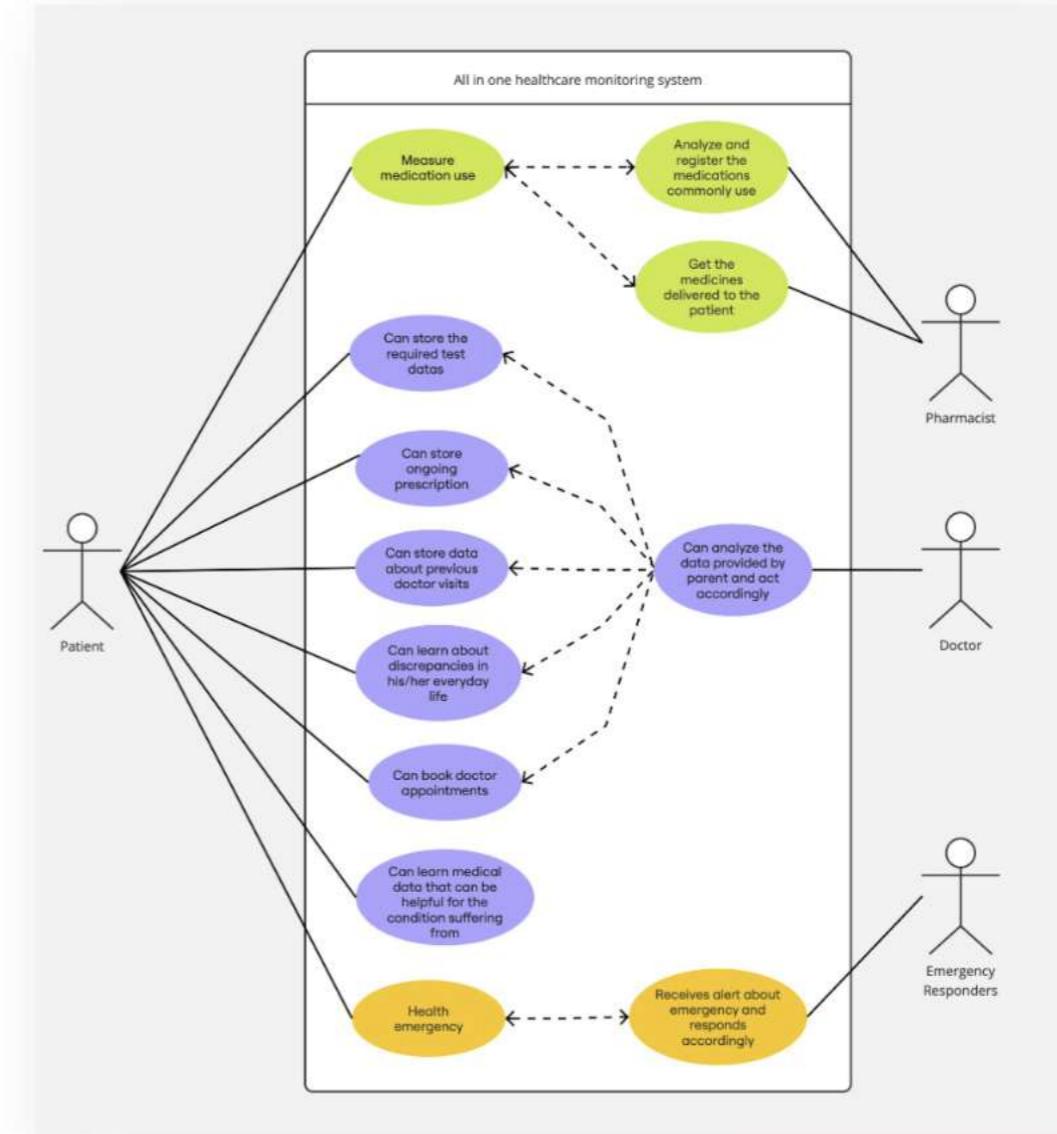

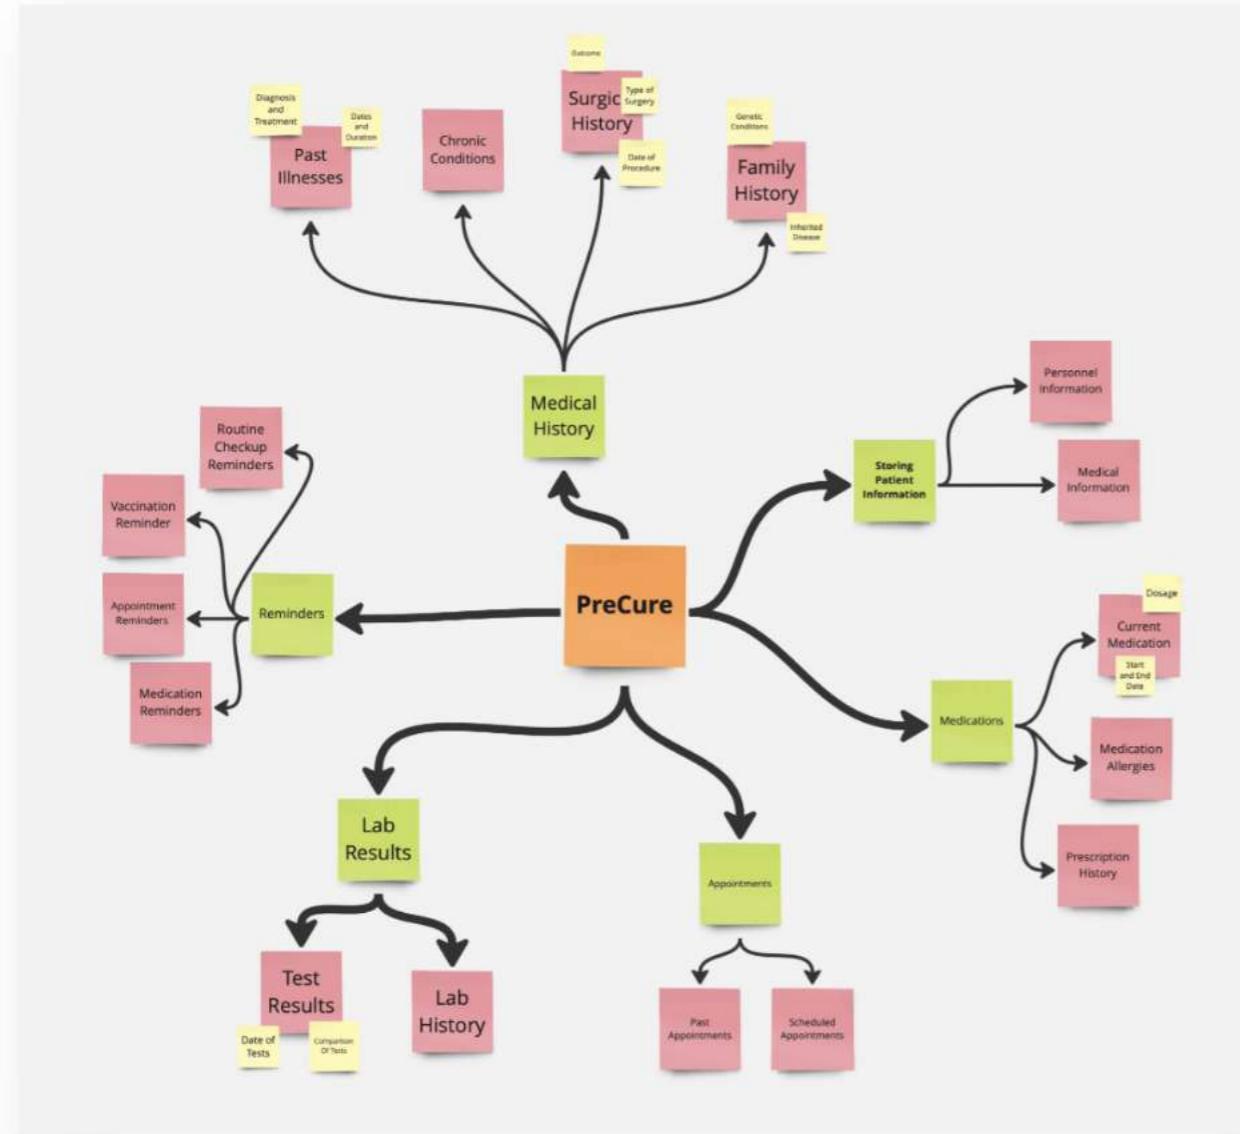

Requirement Gathering Interview with a Doctor

Mental Model

Use Case Diagram

Personas & Scenarios

Original Personas

Sarah

DEMOGRAPHICS

Age: 38
Occupation: Marketing Manager
Health Condition: Manages diabetes while juggling work and family

ABOUT SARAH

Sarah, a busy mom of two with a full-time job, struggles to prioritize her health while managing Type 2 diabetes. Despite using a fitness tracker, she often misses important blood sugar changes. She worries about her health slipping due to her hectic lifestyle and limited time for doctor visits.

WHAT SARAH NEEDS

- Convenience:** A system that keeps all her health info in one place, so she doesn't have to juggle multiple apps and devices.
- Piece of Mind:** Quick alerts when something's off, so she can get help before things get worse.
- Support:** Easy access to doctors when she needs advice, without having to carve out hours for appointments.

Tom

DEMOGRAPHICS

Age: 72
Health Condition: History of heart disease and high blood pressure

ABOUT TOM

Tom lives alone in a quiet neighbourhood. His daughter, who lives a few states away, worries about him, especially since he's had a few scares where his blood pressure spiked dangerously without him realizing it, especially since he's had a few scares where his blood pressure spiked dangerously without him realizing it.

WHAT TOM NEEDS

- Simplicity:** A system that tracks his health automatically, without him needing to do much.
- Safety:** Real-time alerts that can notify both him and his daughter if something goes wrong.
- Reassurance:** Knowing that help is available quickly, especially if his health takes a turn for the worse.
- Scenario:** Tom's wearable device detects an irregular heartbeat and alerts his daughter and doctor. An ambulance is sent as a precaution, and Tom receives immediate advice from his doctor. He feels reassured knowing his family and medical team are watching out for him.

Dr. Patel

DEMOGRAPHICS

Age: 45
Occupation: Cardiologist

ABOUT DR. PATEL

Dr. Patel, a busy cardiologist, struggles to manage patient care as he has to juggle between multiple platforms for records, wearable data, and emergency notifications. He worries that important information might be missed due to this fragmented system.

WHAT DR. PATEL NEEDS

- Efficiency:** A system that pulls together all of his patients' health data - records, wearable info, and emergency alerts - into one place.
- Real-Time Updates:** Fast notifications when a patient's condition changes, so he can respond quickly.
- Less Admin Work:** A streamlined process that lets him focus on patient care, not paperwork.

SCENARIO

Dr. Patel receives an alert about Tom's irregular heartbeat and quickly accesses his health data, including heart trends and medication history. This allows him to respond efficiently, offer advice, and schedule a follow-up. Dr. Patel is reassured that the system helps him manage patient care effectively.

Mark

DEMOGRAPHICS

Age: 50
Occupation: Hospital Administrator

ABOUT MARK

Mark, who oversees operations at a large urban hospital, is responsible for ensuring smooth operations and choosing new technologies. He aims to improve patient care while maintaining system security and privacy compliance. Any technology he adopts must be both effective and easy to implement.

WHAT MARK NEEDS

- Integration:** A system that works well with the hospital's existing tech and doesn't disrupt daily operations.
- Security:** Tools that protect patient data and meet strict privacy regulations.
- Efficiency:** Technologies that improve the hospital's response time and patient outcomes without adding to the staff's workload.

SCENARIO

Mark sees a system to improve the hospital's emergency response time and is impressed by a healthcare monitoring system that integrates seamlessly with their existing software. It allows real-time tracking of patient emergencies while ensuring data security. Confident it will enhance patient care without disrupting operations, Mark decides to implement the system.

Maria

DEMOGRAPHICS

Age: 34
Occupation: Elementary School Teacher
Caregiving Role: Takes care of her mother, who has Parkinson's disease

ABOUT MARIA

Maria, a full-time teacher, also cares for her mother with Parkinson's disease in a rural area with limited access to specialists. She feels overwhelmed by the responsibility and worries about missing signs of her mother's condition worsening.

WHAT MARIA NEEDS

- Support:** A system that helps her keep track of her mom's health and provides alerts if something goes wrong.
- Access to Specialists:** Easy ways to consult with doctors and specialists without traveling hours to the nearest city.
- Reassurance:** Knowing that she's doing everything she can to take care of her mom, even in an emergency.

SCENARIO

When Maria notices her mom's worsening tremors, the system also detects it and recommends a virtual consultation. She speaks with a neurologist at the same day, who adjusts her mom's medication and offers home care advice. Maria feels more supported and less stressed in managing her mom's condition.

Refined Personas

SARAH

Demographics:

Age: 38
Occupation: Marketing Manager
Health Condition: Manages diabetes while juggling work and family

About Sarah:

Sarah, a busy mom of two with a full-time job, struggles to prioritise her health while managing Type 2 diabetes. Despite using a fitness tracker, she often misses important blood sugar changes. She worries about her health slipping due to her hectic lifestyle and limited time for doctor visits.

What Sarah Needs:

Convenience:

A system that keeps all her health info in one place, so she doesn't have to juggle multiple apps and devices.

Peace of Mind:

Quick alerts when something's off, so she can get help before things get worse.

Support:

Easy access to doctors when she needs advice, without having to carve out hours for appointments.

WALTER

Demographics:

Age: 55
Health Condition: History of lung disease and high blood pressure

About Walter:

Tom lives alone in a quiet neighbourhood. His daughter, who lives a few states away, worries about him, especially since he's had a few scares where his blood pressure spiked dangerously without him realising about him, especially since he's had a few scares where his blood pressure spiked dangerously without him realising it.

What Walter Needs:

Simplicity:

A system that tracks his health automatically, without him needing to do much.

Safety:

Imagine receiving real-time alerts that keep him and his daughter in the loop, ensuring they're instantly notified if anything unexpected happens.

Reassurance:

Knowing that help is available quickly, especially if his health takes a turn for the worse.

Scenario:

Walter's wearable device detects an irregular heartbeat and alerts his daughter and doctor. An ambulance is sent as a precaution, and Walter receives immediate advice from his doctor. He feels reassured knowing his family and medical team are watching for him.

DR. PATEL

Demographics:

Age: 45
Occupation: Cardiologist

About Dr. Patel:

A busy cardiologist, Dr. Patel struggles to manage patient care as he juggles multiple platforms for records, wearable data, and emergency notifications. He worries that important information might be missed due to this fragmented system.

What Dr. Patel needs:

Efficiency:

A system that pulls together all of his patients' health data—records, wearable info, and emergency alerts—into one place.

Real-Time Updates:

Fast notifications when a patient's condition changes so he can respond quickly.

Less Admin Work:

A streamlined process that lets him focus on patient care, not paperwork.

MARK

Demographics:

Age: 50
Occupation: Hospital Administrator

About Mark:

Mark, who oversees operations at a large urban hospital, is responsible for ensuring smooth operations and choosing new technologies. He aims to improve patient care while maintaining system security and privacy compliance. Any technology he adopts must be both effective and easy to implement.

What Mark Needs:

Integration:

A system that works well with the hospital's existing tech and doesn't disrupt daily operations.

Security:

Tools that protect patient data and meet strict privacy regulations.

Efficiency:

Technologies that improve the hospital's response time and patient outcomes without adding to the staff's workload.

SAUL

Demographics:

Age: 34
Occupation: Lawyer
Caregiving Role: Takes care of his elder brother, who has Parkinson's disease

About Saul:

Saul is a dedicated lawyer who juggles a demanding job while caring for his elder brother, who has Parkinson's disease. They share a small apartment in a rural area, making it difficult to access specialised care. The limited space adds to the challenges of caregiving, and Saul often feels overwhelmed by the responsibility. He constantly worries about missing signs of his brother's condition worsening and wants tools that can help him stay on top of his brother's health without compromising his work.

What Saul Needs:

Support:

A system to track his brother's health and send alerts if any issues arise, providing peace of mind.

Access to Specialists:

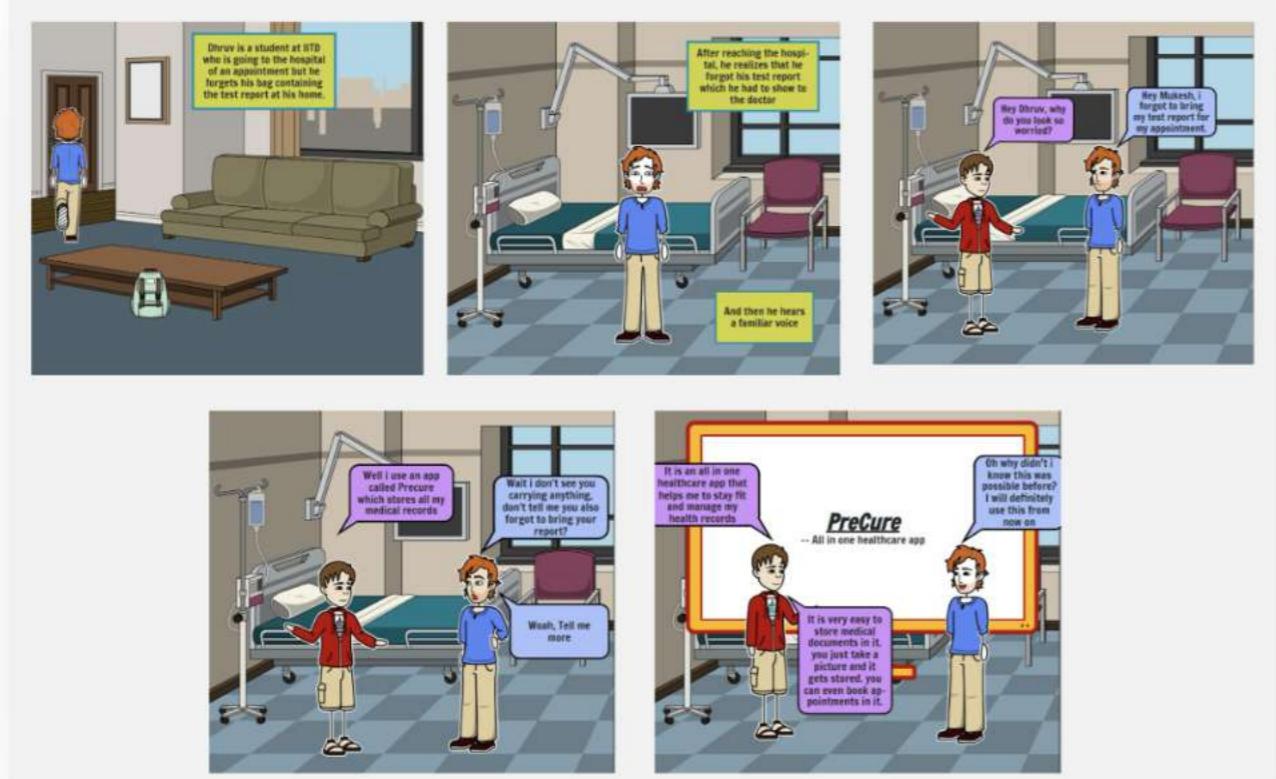

Convenient options for virtual consultations with doctors and specialists, reducing the need for long trips to the city.

Reassurance:

Confidence that he's doing everything possible to care for his brother, especially in emergencies, despite their small living space.

Original Scenarios

Refined Scenarios

Refined Scenarios.....

Scenario-1:

Mohan, a resident of IIIT Delhi's hostel, maintains his health through daily exercise. He relies on an app called PreCure to monitor his well-being. PreCure tracks his steps and blood pressure throughout the day, providing a comprehensive report each evening. If any concerns arise, the app promptly alerts him and allows him to schedule an online appointment with a specialist. Additionally, PreCure keeps track of his caloric intake and offers personalized nutritional advice. Since incorporating PreCure into his routine, Mohan has successfully stayed healthy and fit.

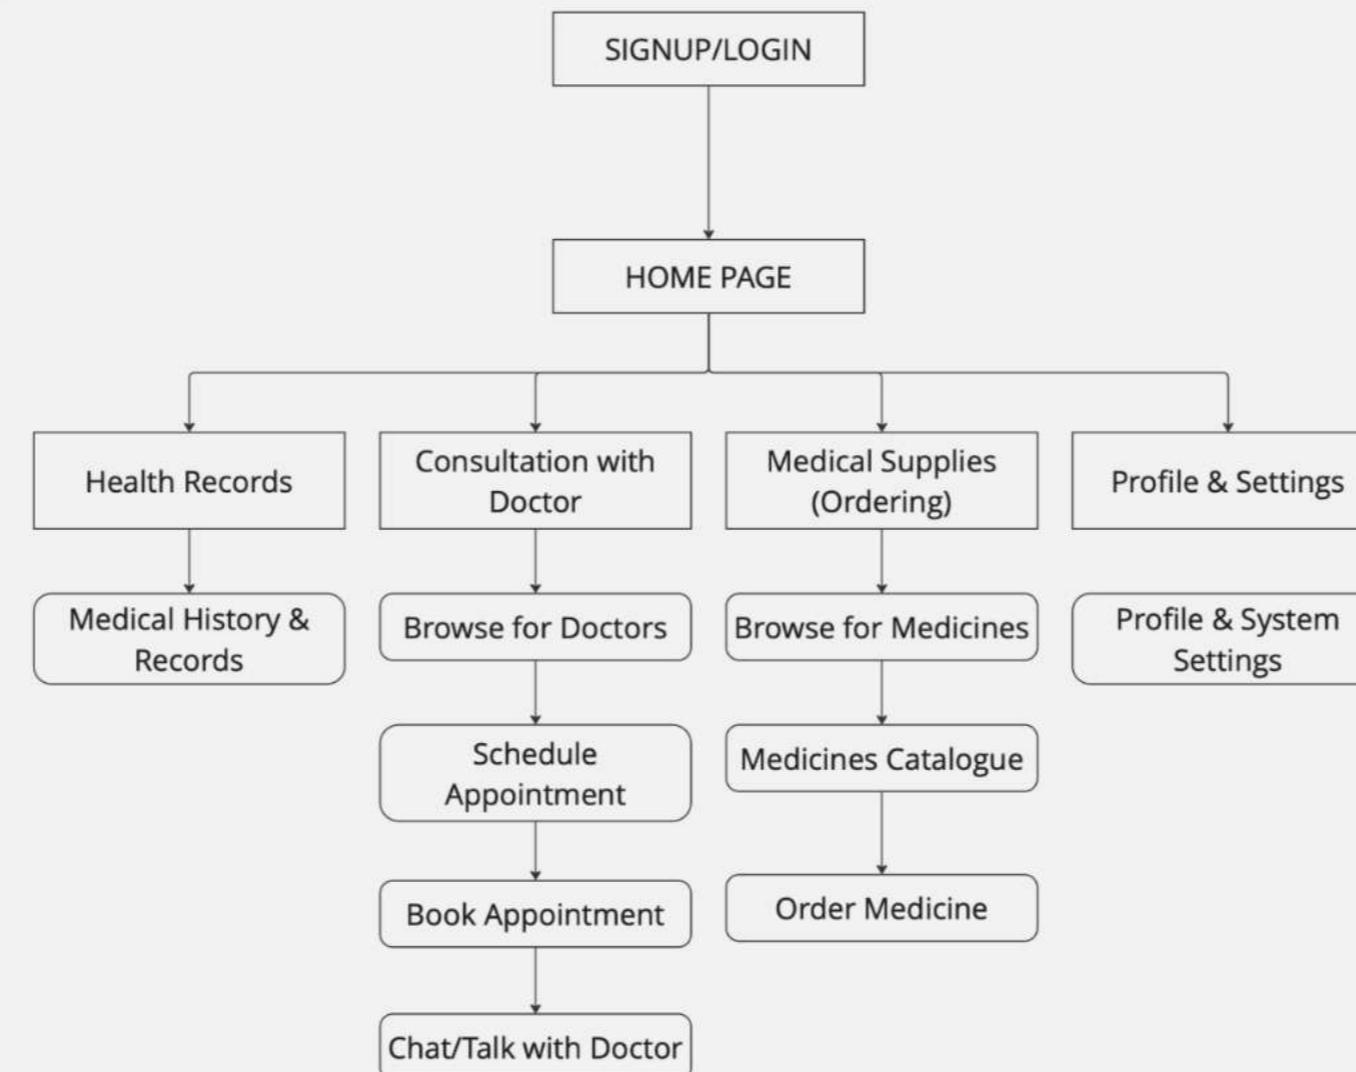

Scenario-2:

Sohan, a web developer from Delhi, has been frequently visiting the doctor since his recent diabetes diagnosis. Struggling to manage all his medical reports and prescriptions, he downloaded an app called Precure. This app allows him to store medical records effortlessly by simply taking a photo or uploading documents. Since using Precure, Sohan has seamlessly organized his medical data, booked online appointments with specialists, and conveniently ordered prescribed medications through the application.

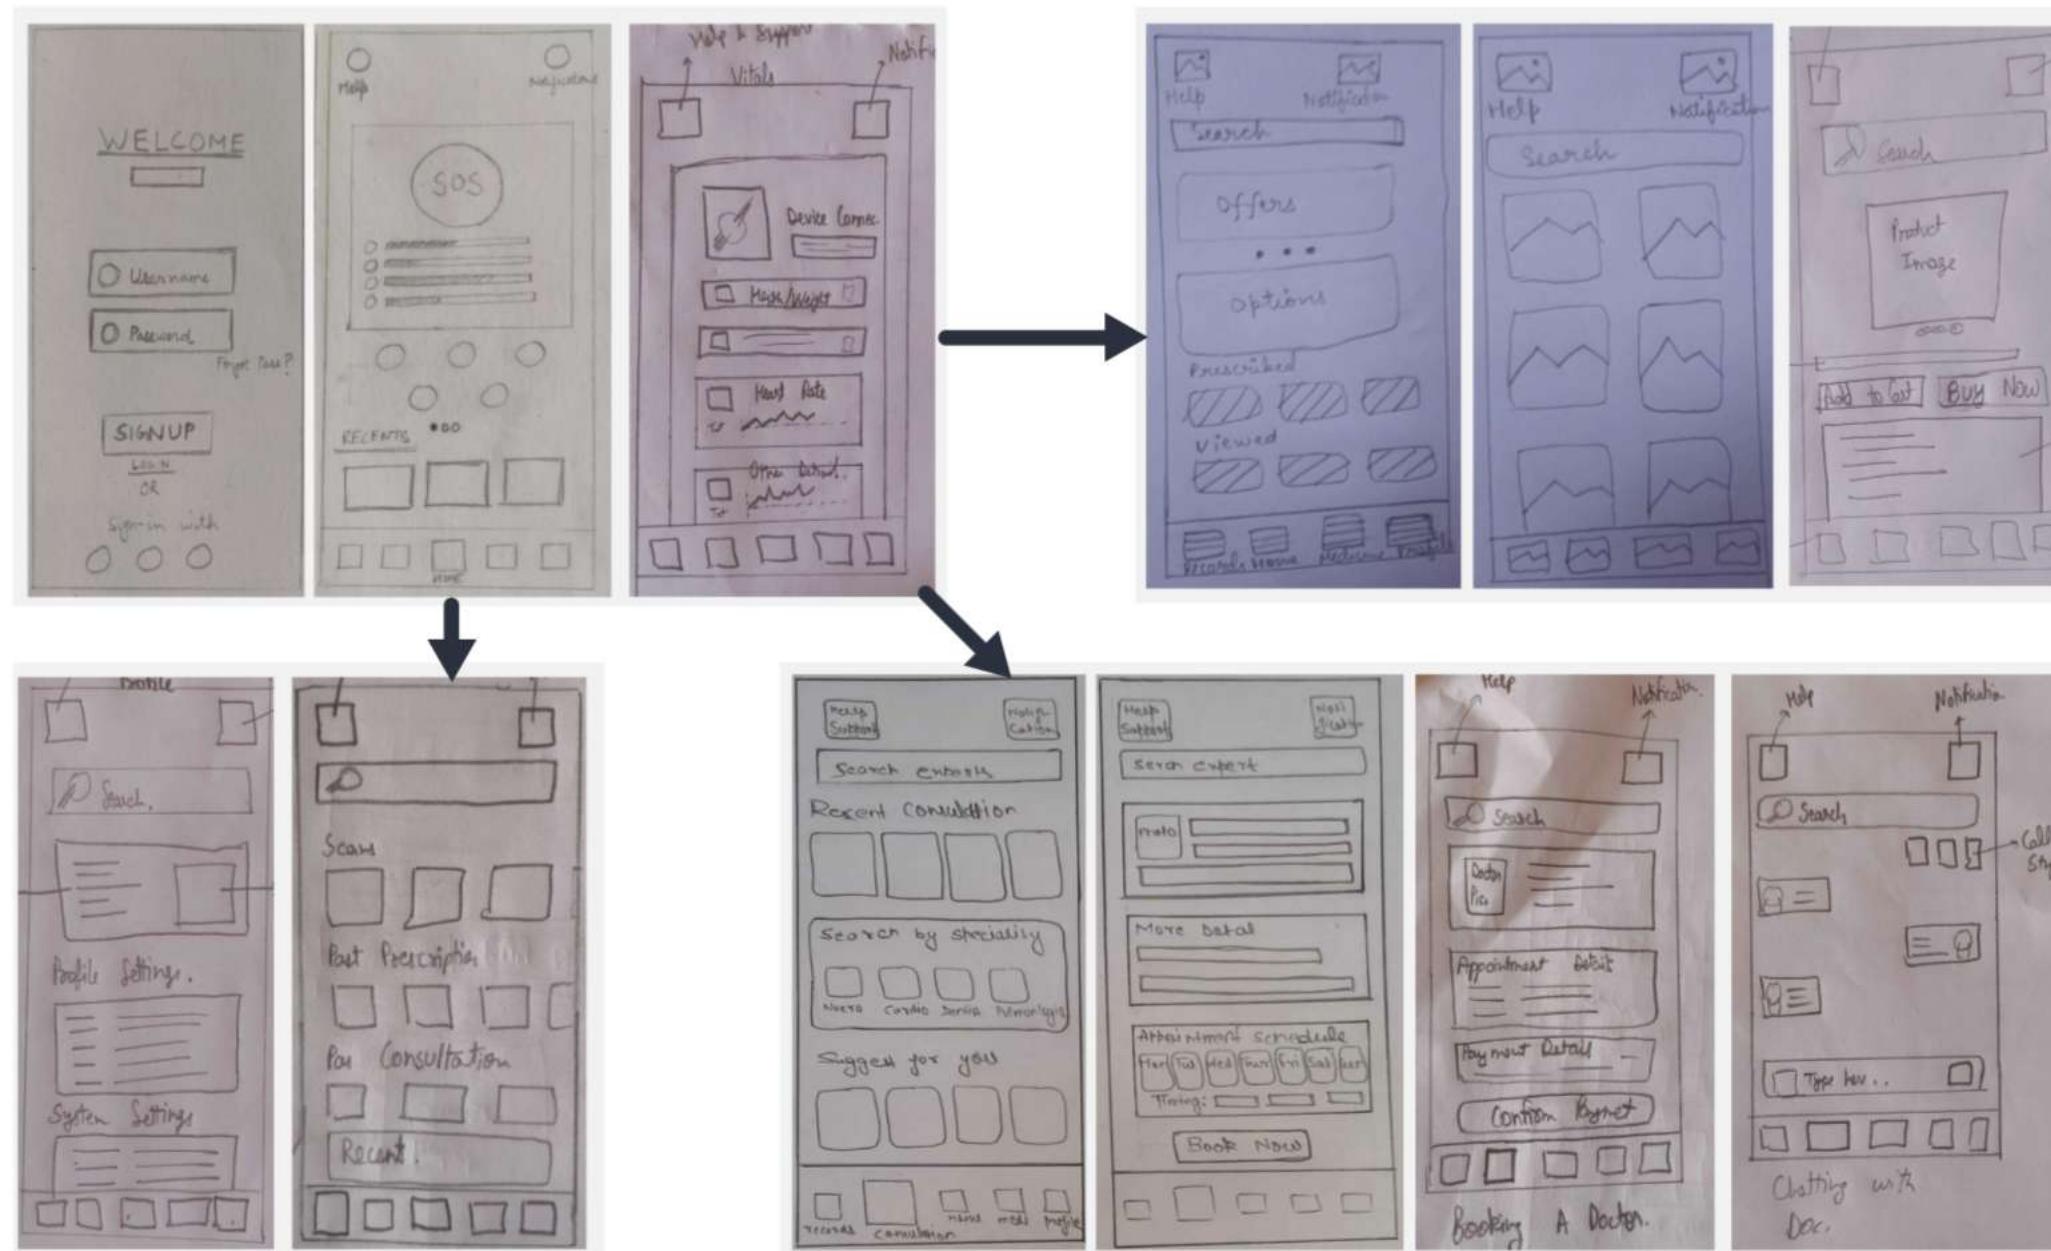

Low Fidelity Design

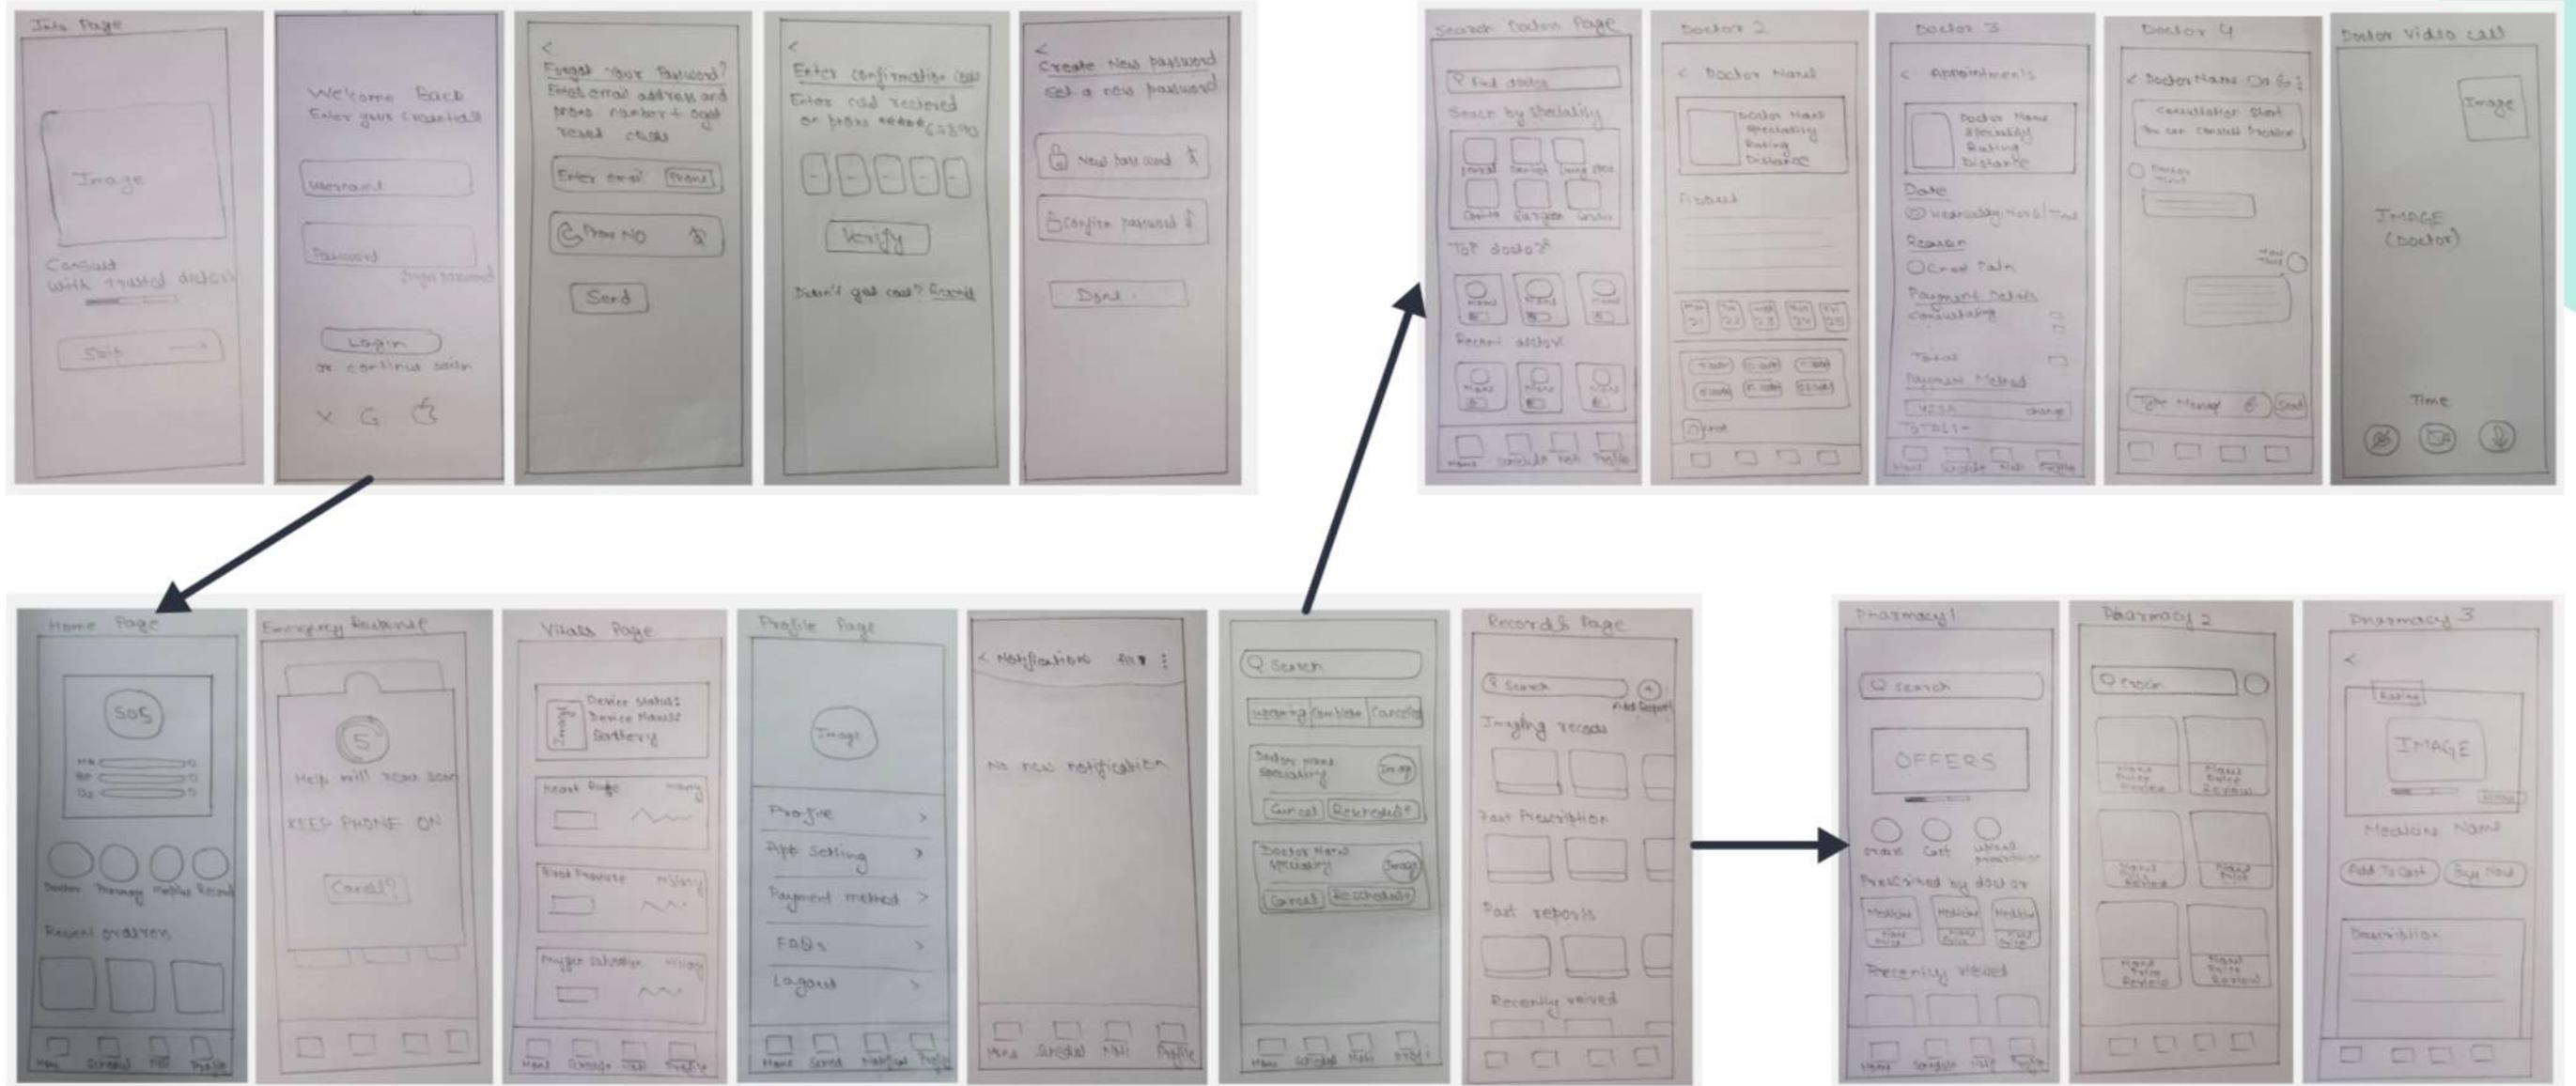

Info Architecture / General Taskflow

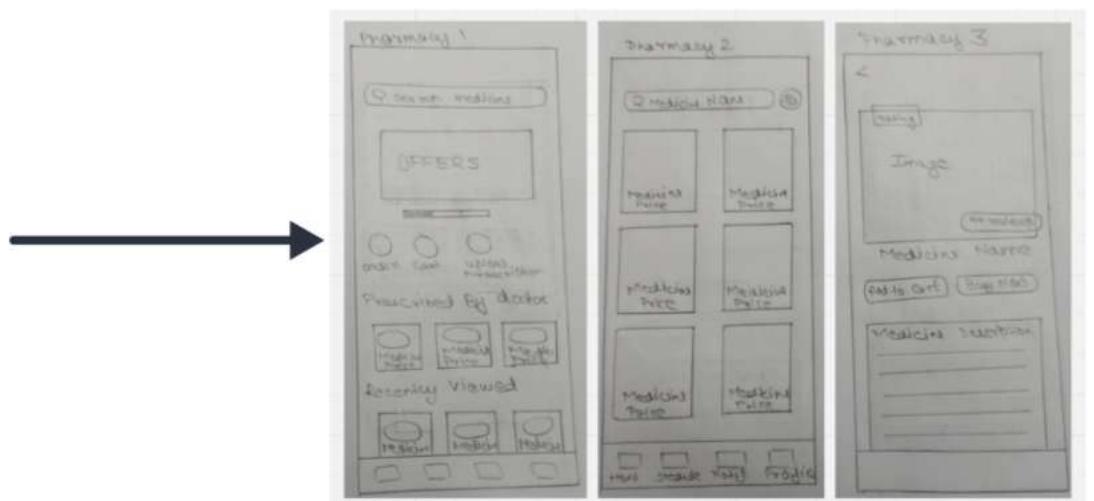

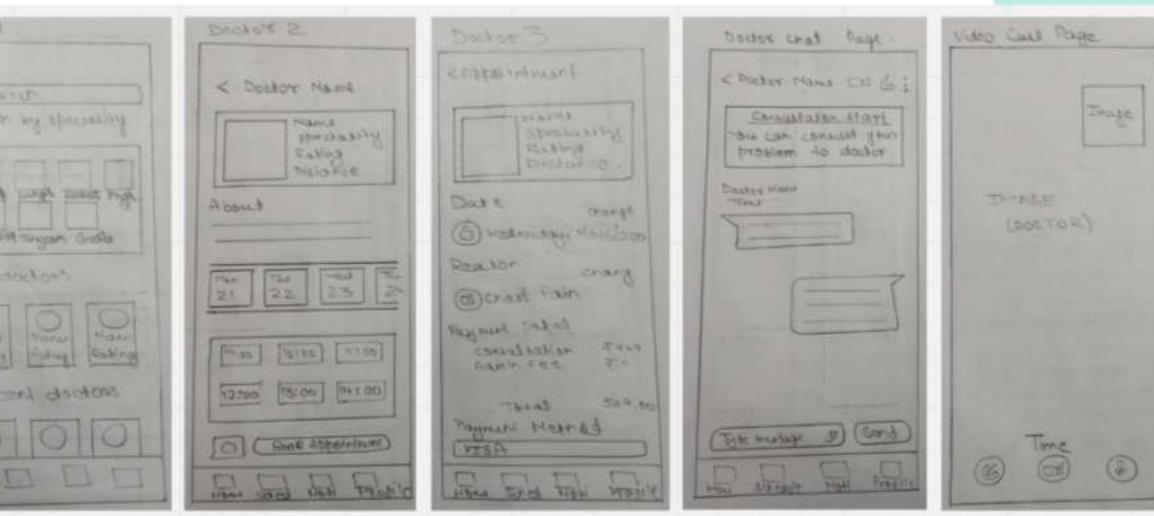

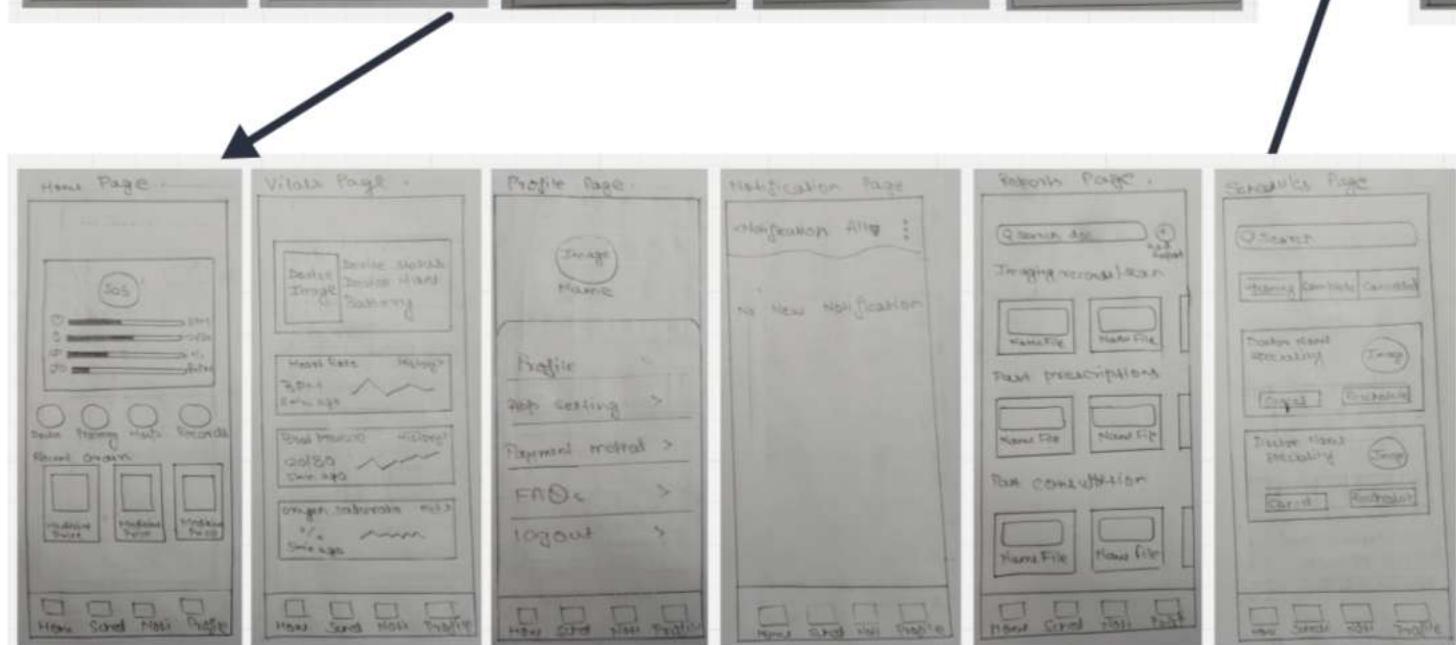

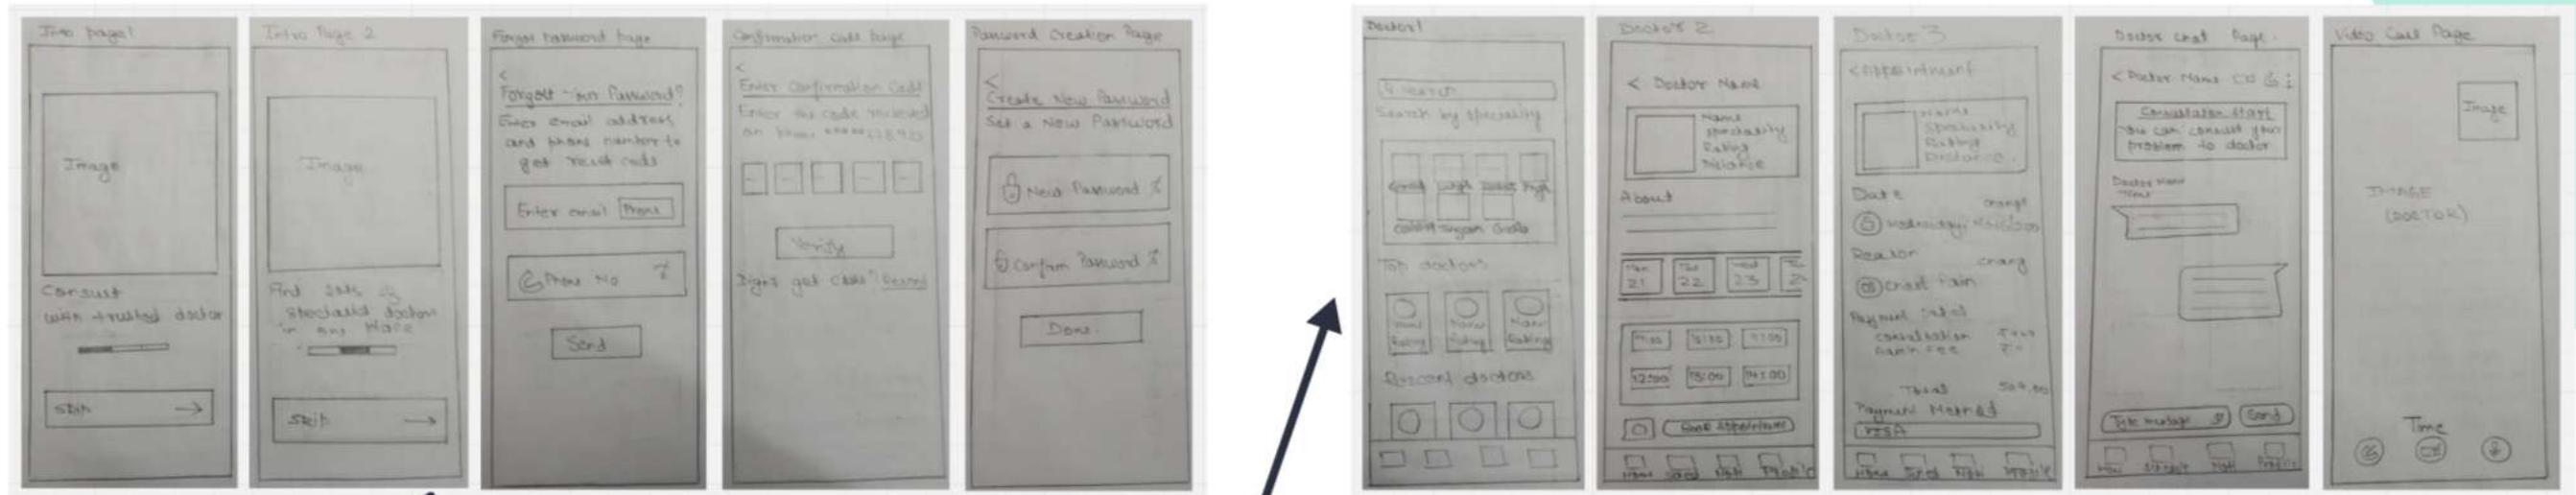

Original Lo-Fi

Improved Lo-Fi

Refined Lo-Fi (Final)

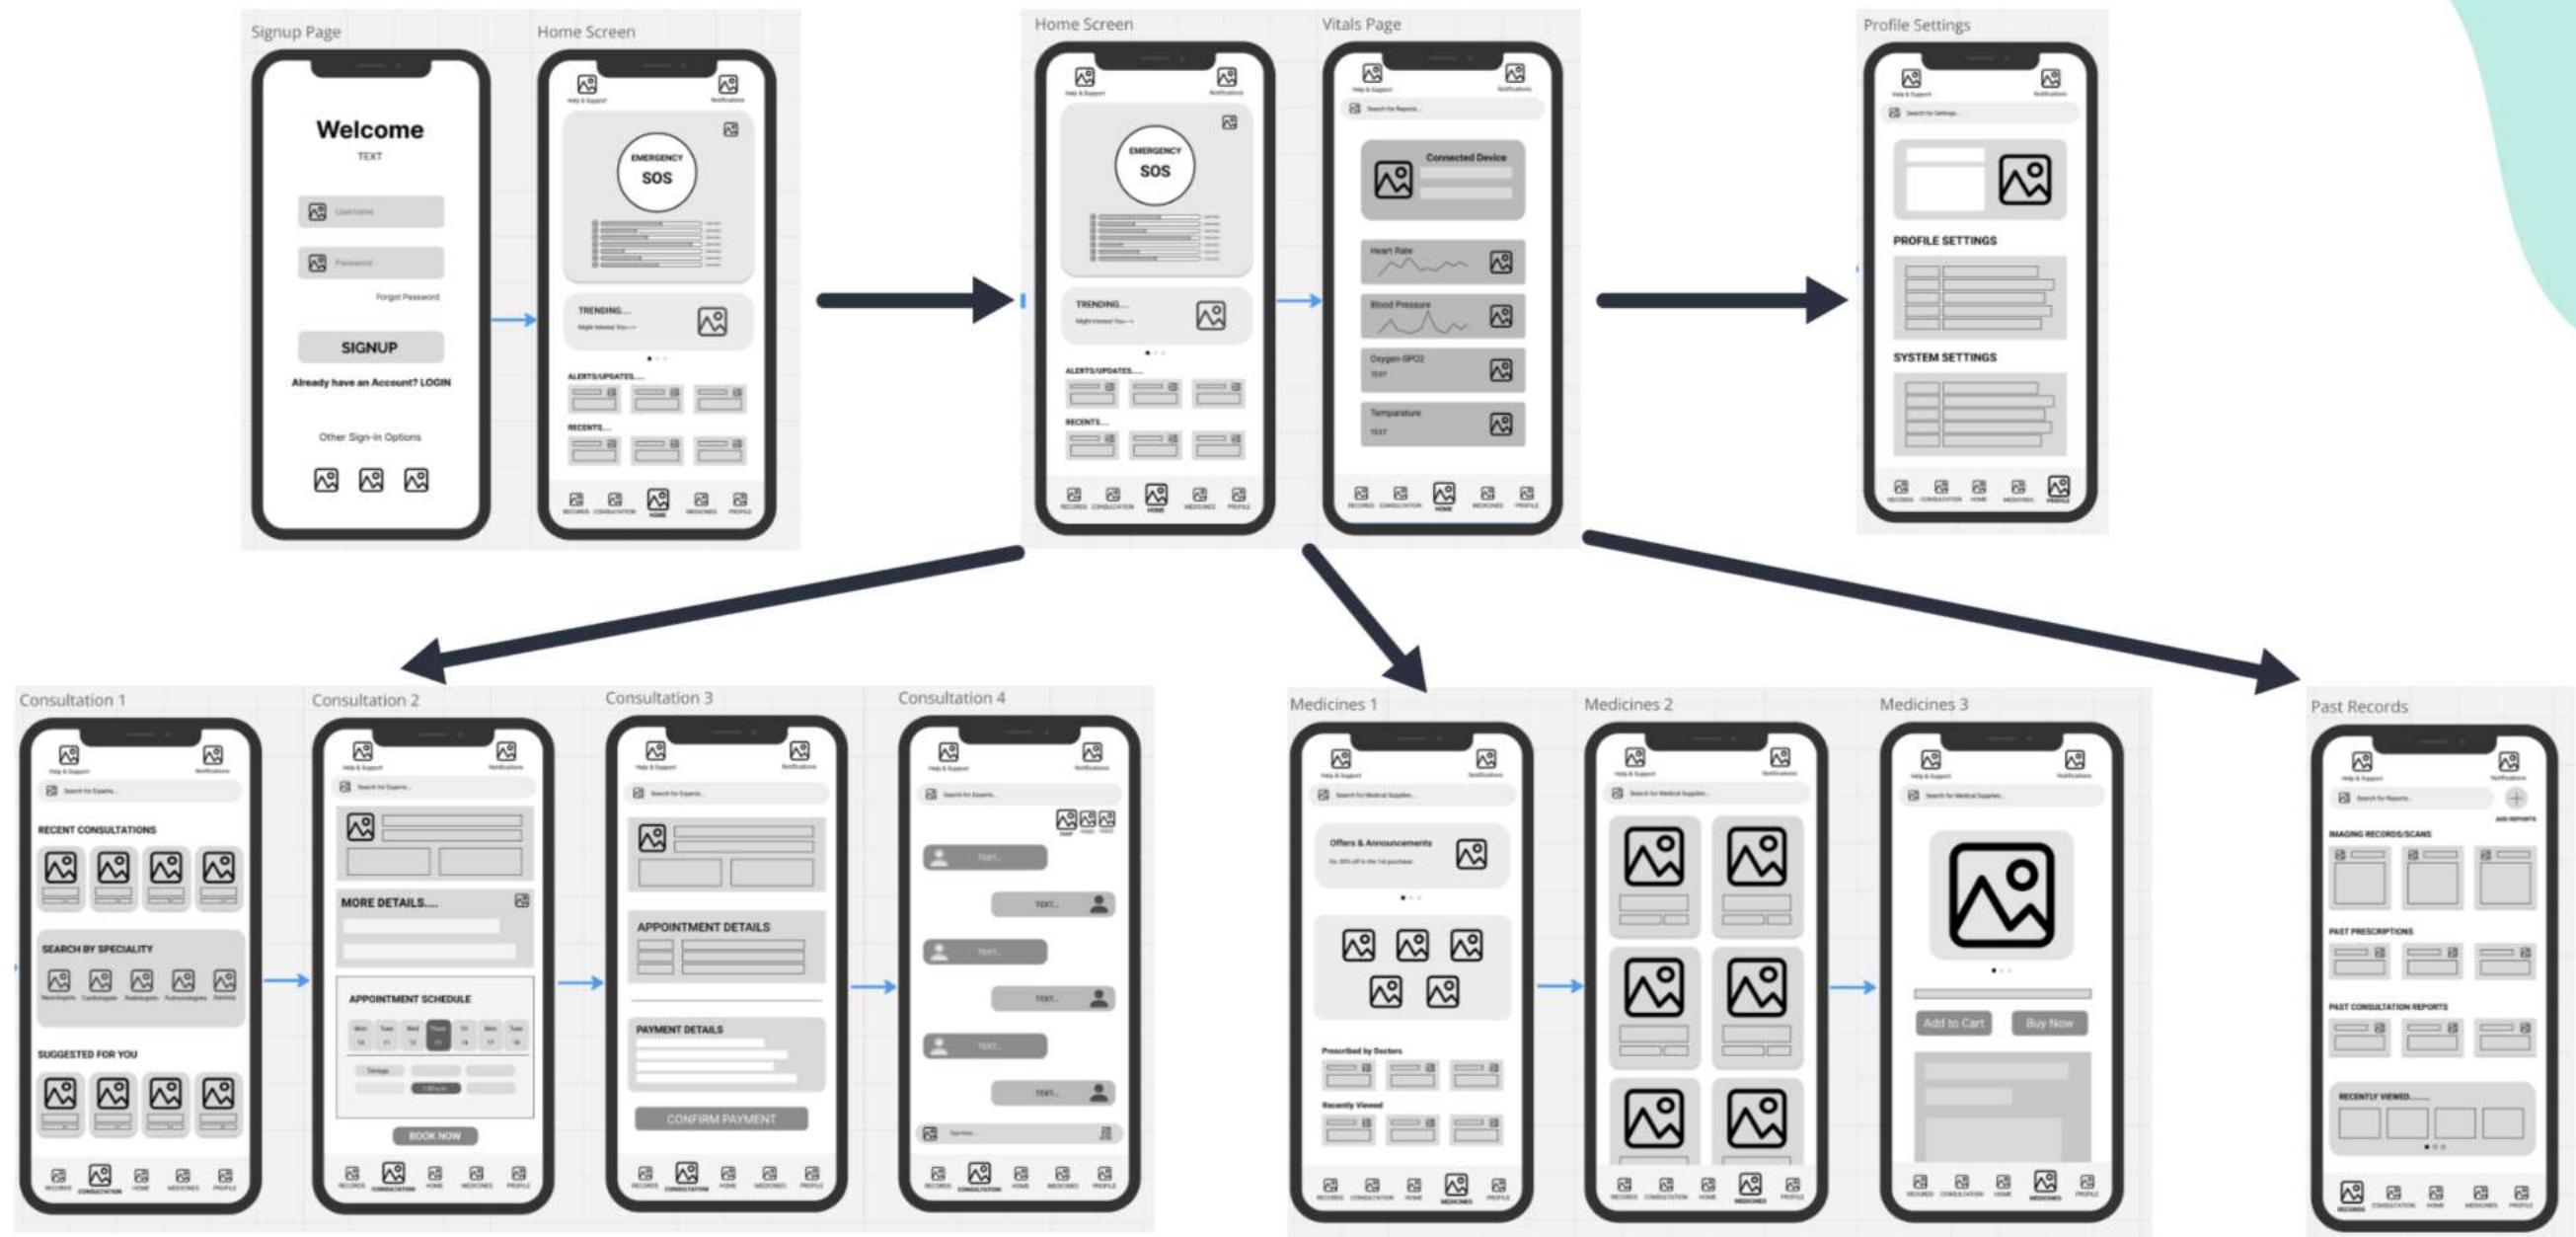

Mid Fidelity Design

Original Mid-Fi

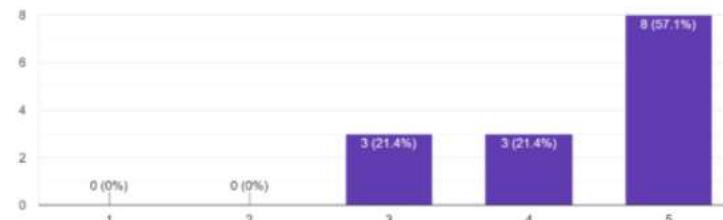

Improved Mid-Fi (Alternate Design)

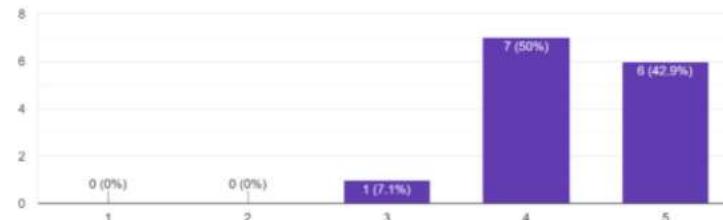

Survey Responses for Mid-Fi Evaluation

How would you rate the Visual Hierarchy (the arrangement of elements in order of importance)?
14 responses

Were you able to understand the purpose of each screen easily? (How Intuitive were the Designs?)
14 responses

What is your Profession?
14 responses

Are there any features you find missing that would be essential?

9 responses

I am not sure if this a missing feature or not but it would really be beneficial if there was a calling feature with the doctor.

NO

Not Really

There should also be a way to book a physical appointment. Suppose the person has a chest problem then only a stethoscope can best measure it accurately.

No, all the features are there

Should able to precise with all data displayed

how about a blood test booking section? and also how about video call from doctor to patient? and a how about adding something like doctor reviews and rating when we click on the doctor profile? it might help in choosing doctors.. (just a suggestions)

Do you have any other suggestions or comments regarding the wireframes?

8 responses

The pharmacy section in my opinion lacked finishing.

Would suggest to make the corners rounder in some of the wireframe

Not At All

Add record option can be added in the record page to make it easier to add a new record if

Decrease the cognitive load

It's good but improve the design and Colour pallet

Instead of having the emergency SOS in a rectangle box. why dont you just have that circle wala button.

No

Which age group do you belong to?

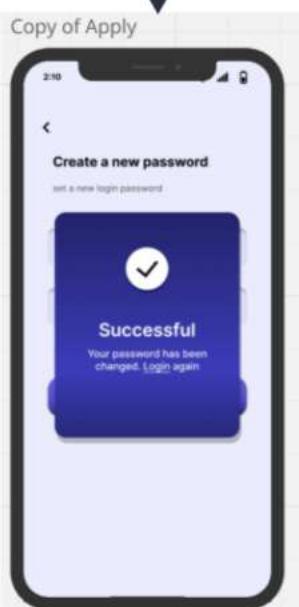

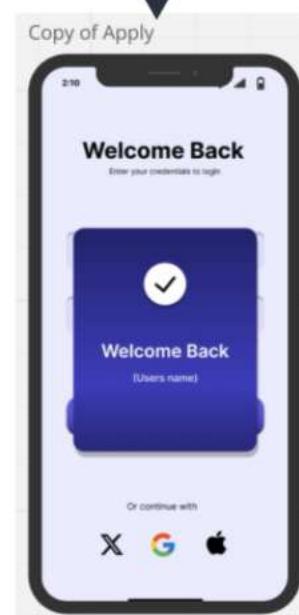

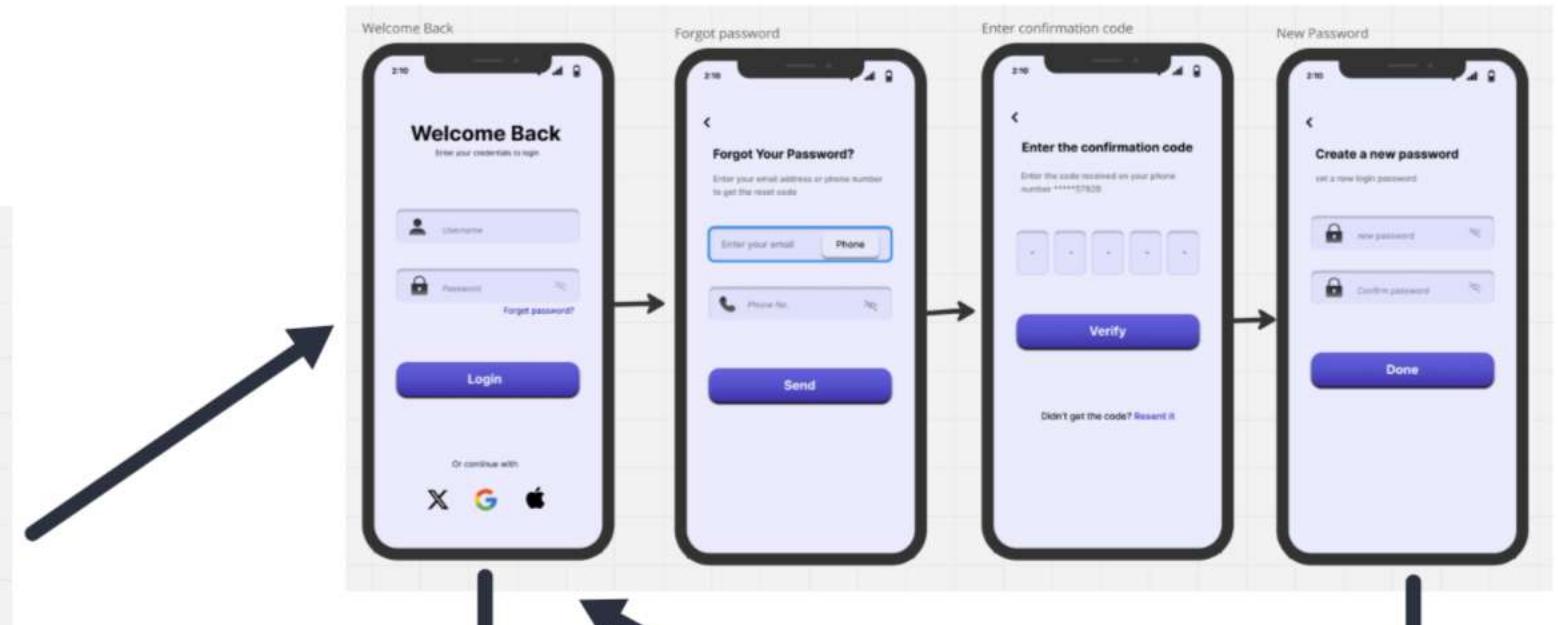

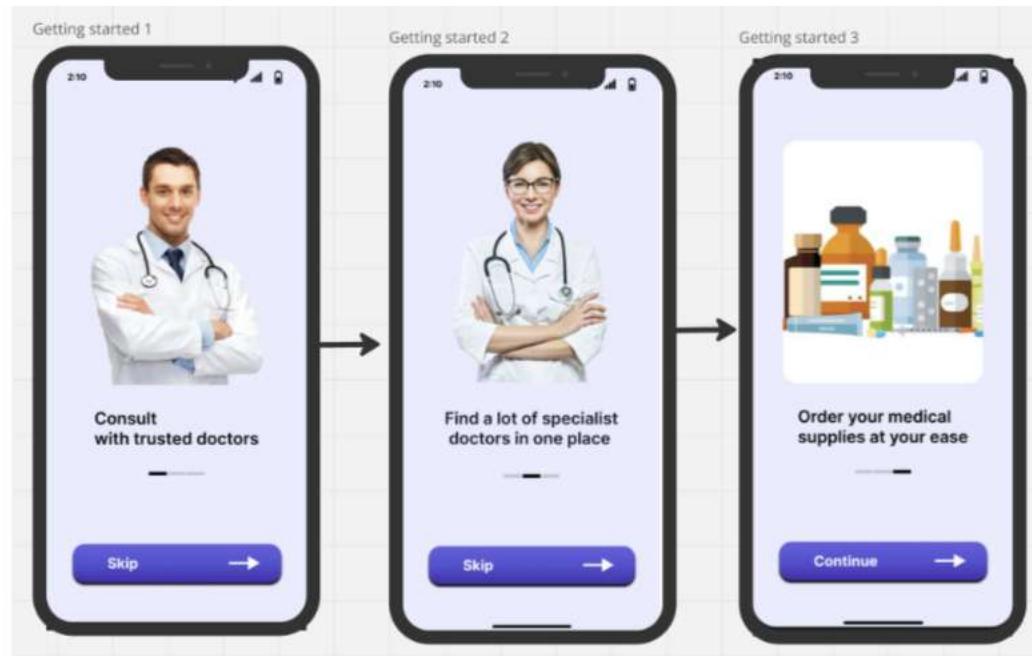

14 responses

About Our Logo

Key Elements:

- The heart with an ECG line symbolizes real-time health monitoring.
- The stethoscope represents trust and professionalism in healthcare.
- The smartphone outline emphasizes the app's digital and accessible nature.

Design Process:

- Initially, we experimented with complex and cluttered logo designs.
- Through iterations, we realized that simplicity is the key to effectively conveying the app's purpose.

Final Design Philosophy:

- Clean and recognizable visuals.
- A balance between modern technology and human-centric care.
- A logo that is professional, impactful, and user-friendly.

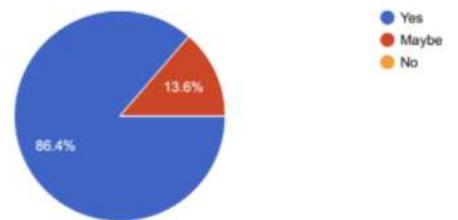

User Testing & Evaluation

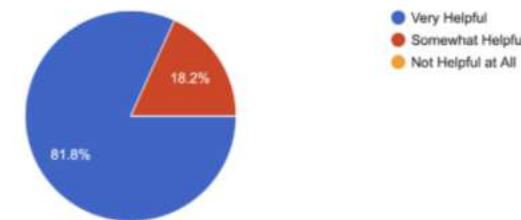

Survey Responses for Hi-Fi Evaluation

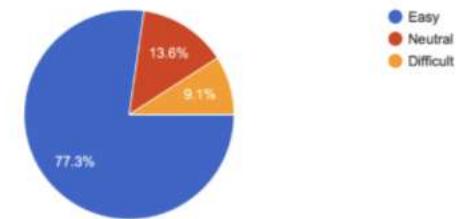

Were you able to easily locate key features like 'Doctor', 'Pharmacy', and 'Records'?
22 responses

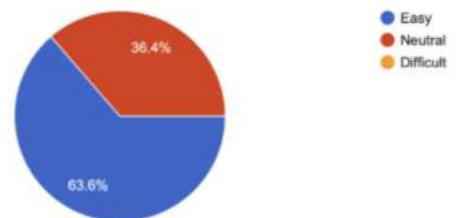

How helpful is the Information Organisation in the 'Vitals' and 'Records' sections?
22 responses

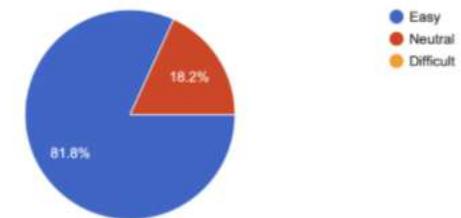

How easy is it to navigate through the app screens?
22 responses

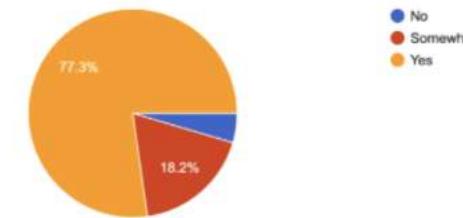

How Straightforward is the process for Scheduling an Appointment?
22 responses

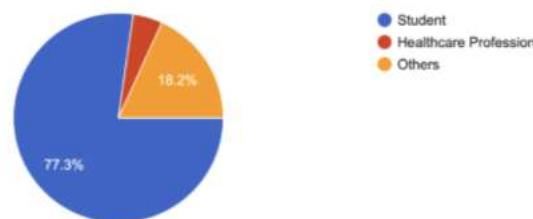

How Straightforward is the process for Ordering Medical Supplies?
22 responses

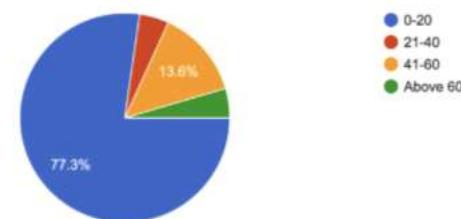

Is the App's purpose clear from the UI design?
22 responses

Which Title Best Describes You?
22 responses

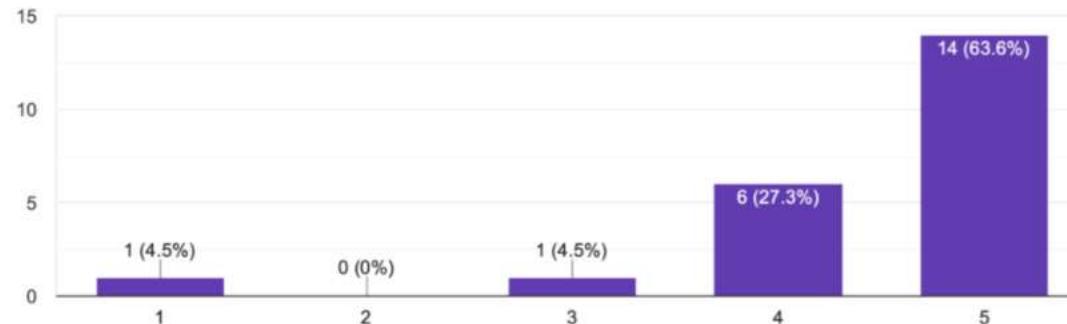

What Age Group do you Belong to?
22 responses

Survey Responses for Hi-Fi Evaluation

How would you rate the overall user interface (UI) of the App?

22 responses

Any Other Comments or Suggestions for Improving the App Design? (Optional)

4 responses

Very good design

Great Work!!!

No

Very nice

Is there any Feature you Feel is Missing in the Current Design? (Optional)

3 responses

No

Would you Recommend any Changes to Improve the App's Usability? (Optional)

4 responses

No

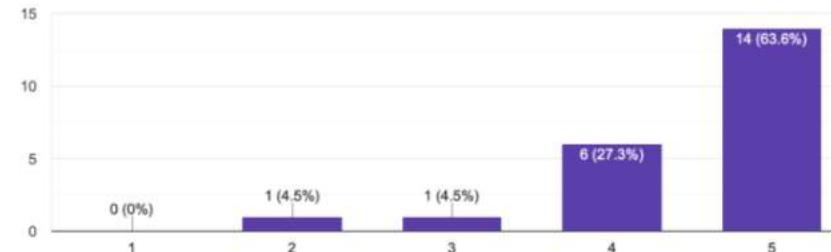

Please be careful with your prototyping and provide a path to go back to previous pages once we reached a page like we don't have any path to go back to home from search

On a scale of 1 to 5, how satisfied are you with the overall design?

Average rating (4.50)

Feedback Analysis

Overview:

The survey collected feedback on the app's design and user experience, focusing on interface intuitiveness, navigation ease, and the clarity of features. The respondents predominantly belonged to the 0-20 age group, with a mix of students and a few participants from older age groups. The survey aimed to gauge the app's usability and gather suggestions for potential improvements.

Key Insights from User Feedback:

Strengths

- UI and Navigation: Rated highly for its clean design and ease of navigation, with key features easily locatable.
- Task Completion: Processes like scheduling appointments and ordering medical supplies were straightforward.
- Information Organization: Sections like 'Vitals' and 'Records' were well-organized and helpful.

Areas for Improvement

- Add a "Back to Home" button to improve navigation.
- Provide onboarding guides to assist first-time users.
- Enhance accessibility for older users with simplified navigation and larger fonts.

Recommendations

- Focus on improving navigation and clarity for a seamless user experience.

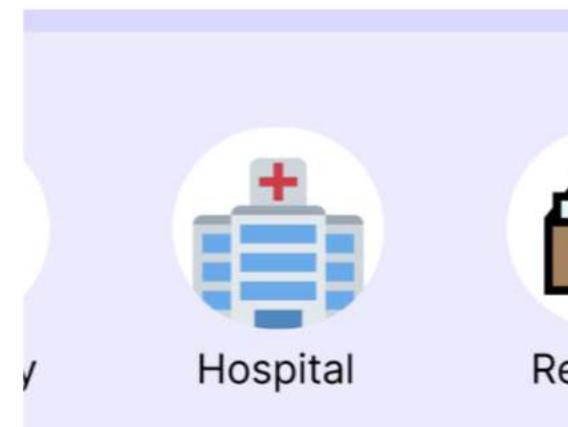

Improvements (Post Hi-Fi Evaluation)

- There should also be a way to book a physical appointment. Suppose the person has a chest problem then only a stethoscope can best measure it accurately.

Added an option to change appointment type from online to offline while booking.

- how about a blood test booking section? and also how about video call from doctor to patient?

The Hospital feature of the app will have all the necessary testing options where one could book a test by showing a proper verified prescription.

Improvements (Post Hi-Fi Evaluation)

how about adding something like doctor reviews and rating when we click on the doctor profile? it might help in choosing doctors.. (just a suggestions)

Learnings, Reflections & Contributions

Reflecting on the Design Process.....

Our journey through the design and development of the healthcare monitoring system PreCure has been both challenging and enlightening. From initial brainstorming sessions to creating high-fidelity prototypes, every step required meticulous planning, collaboration, and adaptability. Here are our key reflections:

- Understanding User Needs: Initially, defining the problem space was challenging due to the varied needs of our stakeholders. Through iterative feedback, surveys, and persona development, we learned the importance of empathizing with users to deliver tailored solutions that genuinely address their concerns.
- Importance of Feedback: User testing highlighted gaps in our designs that we wouldn't have noticed otherwise, such as the need to simplify the UI and incorporate features like doctor ratings and an emergency SOS function. This reinforced the value of actively seeking and implementing feedback at every stage of the project.
- Collaboration Across Roles: Coordinating tasks effectively within a diverse team was a learning curve. Establishing clearer communication protocols and holding regular meetings greatly improved our workflow and ensured that everyone was aligned with the project's goals.
- Adapting to Challenges: We faced several challenges, from design iterations under tight deadlines to integrating diverse ideas from team members. Adapting our approach by balancing multiple ideas and refining features like the "Doctor Ratings" and "Emergency SOS" sections helped us enhance our problem-solving skills and underscored the value of iterative improvement.

Learnings from the Project.....

- **Empathy is Key:** Developing detailed personas and scenarios made us realize the critical role empathy plays in understanding user challenges. This process helped us create more user-centered designs that cater to the specific needs of our target audience.
- **Iterative Design Matters:** Beginning with low-fidelity designs allowed us to experiment and refine ideas before committing to high-fidelity prototypes. This iterative process was essential in balancing functionality with aesthetics and ensured that we addressed usability issues early on.
- **Data-Driven Decisions:** Feedback from surveys and interviews provided actionable insights, such as adding a “Book Physical Appointment” feature and improving navigation pathways. This underscored the importance of user data in making informed design decisions.
- **Balancing Simplicity and Functionality:** Designing a healthcare app required us to strike a balance between a clean, intuitive interface and comprehensive functionalities. Reducing cognitive load while maintaining depth was a valuable learning experience that improved the overall user experience.
- **Importance of Teamwork:** Despite initial role confusion, mutual understanding and shared goals helped us align better as a team. Effective teamwork was instrumental in meeting project deadlines and achieving our quality benchmarks.
